The threat landscape is continually expanding and organizations are under continuous attack and overwhelmed with alerts. Thousands of incidents occur each day and security professionals only have time to deal with dozens. This creates operational chaos. Security teams need next-generation security solutions to help them respond faster, defend proactively and invest smarter.

Just-in-Time Intelligence

Threat intelligence is continuously gathered, categorized, risk ranked (for severity and confidence) in Anomali’s ThreatStream platform and then delivered in real-time to your Infoblox instance for detection of security threats in your enterprise infrastructure for the security and threat intelligence teams to quickly see high priority threats to your business. Each of the selected IOCs for integration into your Infoblox instance enriched with factors such as risk score to add context and relevance to the delivered information.
**Benefits of Anomali**

- Easy-to-use interface to view threat information received through STIX/TAXII feeds.
- Analyze and correlate data into actionable information: SIEM rules, reports, and dashboards.
- Pinpoint IOCs - quickly search for a specific indicator, search for an indicator type over a time range, and drill-down into details.
- Eliminate unnecessary, duplicative and irrelevant indicators - before they enter your infrastructure.
- Identify and prioritize the events that matter now - without DIY scripting.
- Machine-to-Machine learning algorithms scale to accommodate thousands of IOCs per minute across your environment.

**Benefits of Infoblox**

- Get protection against the widest range of DNS attacks.
- Maximize up time and reduce OpEx with enterprise-grade DDI.
- Automate network services for cloud and virtualization.
- Enforce security policies and automate change.
- Control your network.
- Automated DDI infrastructure

**Benefits of the Joint Offering**

The Anomali Infoblox integration is quick and easy. The Anomali API delivers threat intelligence from the ThreatStream platform via Anomali Link that configures RPZ Zones and pushes IOCs via Anomali Link. This list is comprised of the most malicious Indicators of Compromise (IOC’s) based on the ThreatStream platform Retina process risk ranking analysis and an indicator type recognition. Infoblox does the DNS job, but uses the blacklist which we provide.

**Seamless and Automated**

The Anomali API provides seamless, automated integration of indicator data to deliver near, real-time threat intelligence to your Infoblox instance and reduce your operational workload by blocking the obvious problem at the edge of the network.

**Correlation**

After Infoblox rules fire using the Anomali Block List to successfully block or redirect an IOC, Anomali enables the analyst to take the process one step further using the browser-integrated Anomali Plugin to drill down into the IOC to understand the context and details of why this was a malicious indicator to a level unmatched by our competitors making the security and threat intelligence team that much more knowledge, efficient, and effective.

**About Anomali**

Anomali delivers earlier detection and identification of adversaries in your organizations network by making it possible to correlate tens of millions of threat indicators against your real time network activity logs and up to a year or more of forensic log data. Anomali’s approach enables detection at every point along the kill chain, making it possible to mitigate threats before material damage to your organization has occurred.

**About Infoblox**

Infoblox (NYSE:BLOX) delivers critical network services that protect Domain Name System (DNS) infrastructure, automate cloud deployments, and increase the reliability of enterprise and service provider networks around the world. As the industry leader in DNS, DHCP, and IP address management, the category known as DDI, Infoblox reduces the risk and complexity of networking. Infoblox operates in more than 25 countries and counts as its customers some of the world’s largest businesses, including more than one-third of the Fortune 500. Infoblox products provide its more than 7,500 customers in a variety of industries competitive differentiation in network automation, virtualization, business continuity, mobility and other network applications.
