

ANOMALI®

 Silobreaker

COVER YOUR BLIND SPOTS

Leverage unstructured data to contextualize threats with Anomali and Silobreaker

ANOMALI AND SILOBREAKER JOINT SOLUTION FEATURES

- The Anomali ThreatStream platform connects Silobreaker's vast dataset of news, blogs, feeds and forums to your existing security solutions, allowing you to understand and act against a wide spectrum of threats.
- Map observables to actors, malware and TTPs using Silobreaker data
- Pivot seamlessly into Silobreaker for additional context and analytics
- Create content feeds for millions of entities – from malware and vulnerabilities to credentials and credit cards

IMMEDIATE TIME-TO-VALUE

- Quickly surface context and evidence for observables
- Gain visibility into key topics and events reported from over a million sources
- Enhance your intelligence collection to meet complex and evolving requirements

STRATEGIC INTELLIGENCE. EMPOWERING DECISIONS.

Silobreaker is an intelligence platform that processes and analyses unstructured data. By indexing and analyzing information from close to a million different sources, including blogs, feeds, news, forums, research, pastes and social media, Silobreaker lets customers understand the “what,” “how,” “when,” and “why” of events — as well as the context behind them. The Anomali-Silobreaker integration allows clients to work with unstructured data from a vast array of open and closed sources — without leaving the ThreatStream platform.

CRITICAL INTELLIGENCE

Multi-source contextualized intelligence to provide a 360 degree view

FLEXIBLE DEPLOYMENTS

Fast, scalable implementation on-premises and in the cloud

IMMEDIATE RESULTS

Identify and understand threats more efficiently

CASE STUDY

CHALLENGE

There is an overwhelming amount of data on the web, but without the tools or the personnel to effectively act on it, critical intelligence can often be missed.

SOLUTION

Silobreaker's automatic analysis and contextualization of unstructured data from open, closed, deep and dark web sources can extract entities, which are fed into ThreatStream as observables, complete with a reference to the source.

CUSTOMER BENEFIT

Streamline the process of feeding observables into ThreatStream from OSINT data by harnessing the power of a platform that does it for you, allowing you to look beyond your perimeter and understand cyber threats in the context of both your organization and the world at large.

CASE STUDY

CHALLENGE

With so much data around actors, organizations, and entities of interest, it is time-consuming to continuously collate information around each to maintain situational awareness.

SOLUTION

Actors, organizations, and other entities of interest can be added to a watchlist in Silobreaker. The ThreatStream integration can extract associated content and display it in a threat model which is updated in near-real-time.

In addition, any observables detected within Silobreaker's dataset are automatically extracted and appear within the observables tab.

CUSTOMER BENEFIT

Keep track of items of interest, all in one centralized platform, saving time and reducing the burden of data collection.
